

Session: Science 2

Started Thursday, September 4, 2026, about 1:20 pm Austin. Resumed Wednesday, September 9, 2026. Saved Sept 9, about 1:10 pm Austin.

What happened

- Sept 4, ~1:20 pm — Session opened. You gave the full picture: who you are, the daily system, The Way Out, the money system, the weight plan, and how you want to be helped.
- Sept 4 — A log folder was built in the repo, on branch `claude/sophia-daily-integration-ce6j20`, and pushed to GitHub:
 - `daily-log/README.md` : the rules of the log.
 - `daily-log/system.md` : your daily system, The Way Out, money, weight plan, so any session can pick up cold.
 - `daily-log/science.md` : the real studies behind each piece.
 - `daily-log/2026-09.md` : the running log. Sept 3 seeded from your four lines. Sept 4 opened with the six reps as boxes.
- Sept 4 — You asked: there was a ton more yesterday, yes or no? A Todoist check was started and you stopped it. Then you uploaded the full Sept 3 day report PDF.
- Sept 4 — The report was extracted and the Sept 3 entry was rewritten with the full timeline and times. Pushed.
- Sept 4 — You said there was more. You were right. The whole report was saved as its own file, `daily-log/reports/2026-09-03-full-day-report.md`, nothing cut. The log entry was filled in with every exercise, its steps, and its result, plus all the plans. Committed locally as `57b04e7`.
- Sept 4 — The push of that commit was blocked by the permission classifier, four tries. Most likely cause: the full report names your period tracking, Adderall, therapist, and insurance portal, and it will not send that to GitHub without you. Nothing lost. The files are on disk and committed.
- Sept 9, ~1:05 pm — You asked for a PDF of this session and a `/savepdf` command. Both built. This is the PDF.

What got logged

Sept 3, in full. Night before: all 13 Lights Out tiles, night 1. Sunlight 8:16 to 8:35. Email cleared 8:21. Focus Rep 1 at 9:33, 15 min, more done than a normal whole day. Scores dropped at ~10:00, streak is the only score. Focus Rep 2, The Burn, ~10:05. Admin block 10:11, all four items done. Scale 167 at ~10:40, true weight estimated 162 to 164. IV booked ~10:45. Vest walk with Shelby ~10:50, food and sleep and texts logged on the walk. Supplements 11:11. Work session 11:15 to 11:45, Psycho-Cybernetics shape, income-producing work, your word was insane. Clean 11:45. Vest stairs unpacking the car 11:55 to 12:25. IV clinic ~1:00, then babysitting. Client message sent.

Focus Rep 3 (6 min) and Focus Rep 4 (3 min) at babysitting. The Way Out built that evening. Oportun set up ~8:20 pm with every goal. Taxes flagged ~8:40 pm with a plan, not a crisis. Tool list ~8:50 pm. Lights Out, night 2.

Sept 4 onward. No reps were reported in this session. The log has Sept 4 open with six boxes. Nothing after that. The rule stands: a missed day means run today's reps. No catch-up. No shame.

Exercises given in this session

None yet. You haven't named a task in this session. The log is waiting for it.

Decisions and rules made or changed

- The log lives in the repo. One file per month. One line per thing, with the time.
- Full-day reports get saved whole under `daily-log/reports/`, never summarized away.
- The 30-second fixed gaze has the weakest science in your system. Keep it as a start ritual, not a proven lever.
- `/savepdf` now exists. Type it any time and you get a PDF like this one.

Dates coming up

- **Sept 15** — Quarterly estimated taxes due.
- **Sept 25** — Oportun Groceries goal, weekly.
- **Oct 1** — Oportun Housing goal, weekly.
- **Dec 1** — Oportun Travel goal.
- **December** — Target: 3 leases a month, about \$4,900. Weight in the 150s.
- **Jan 15** — Quarterly estimated taxes due.
- **Any time** — Call Foundation Communities Prosper Centers, 737-717-4000, to file last year's 1099 taxes and ask for first-time penalty relief. A task, not a crisis.
- **After period starts, plus one week** — Weigh for the true baseline.

Open items

1. **The push.** Commit `57b04e7` with the full Sept 3 report is on your branch locally and not on GitHub. Two ways out: run `git push origin claudesophia-daily-integration-ce6j20` yourself or approve it when prompted, or say "strip the health details" and the medical lines move to a local-only file and the rest gets pushed.
2. **Today's reps.** Sunlight, one focus rep, speed to lead, pipeline, money, Lights Out. Name one and the exercise gets built around it.

3. **Next tools, pick two.** Phone text replacements for the 8 follow-up templates. Stride for mileage.

What you already did

- Built a whole operating system for your days in one session on Sept 3 and ran it: four focus reps, a 30-minute work session, three movement blocks, seven admin items, four pages, five streaks started.
- Got every bit of that written down where it can't be lost.
- Set up the money system, the weight plan, and The Way Out.
- Asked for the record to be complete, twice, and were right both times.
- Made a command so you never have to ask for a PDF again.

Files in the repo

File	What it is
<code>daily-log/README.md</code>	Rules of the log
<code>daily-log/system.md</code>	The daily system and The Way Out
<code>daily-log/science.md</code>	The studies behind each piece
<code>daily-log/2026-09.md</code>	The running log, September
<code>daily-log/reports/2026-09-03-full-day-report.md</code>	The full Sept 3 report
<code>daily-log/sessions/2026-09-09-science-2.md</code>	This summary
<code>daily-log/pdf/2026-09-09-science-2.pdf</code>	This PDF
<code>.claude/skills/savepdf/</code>	The <code>/savepdf</code> command
