

Sophia's Day Report

Wednesday, September 3, 2026 · Austin · "Test day": calm, implement a few new things

The night before

- Completed all 13 Lights Out bedtime tasks: dryer, asked boyfriend about tomorrow's food, fridge, dishes, his food, smoothie prep, 10-minute tidy, vacuum, laptop/desk/iPad, Claude chats set up, bathroom + contacts, phone + Apple Watch charging, side of bed.
- Streak: night 1.

Timeline

Time	What happened
~8:00	Up. Showered. Skincare. Back into pajamas. Made the bed right after waking.
8:16	Outside with the prepped smoothie for morning sunlight.
8:21	Cleared email inbox and checked it off. Deleted 2 unused to-do items. Checked off "made my bed".
8:35	Finished 15 minutes of morning sunlight.
~9:05	Research on Huberman, Dispenza, Proctor, Cardone launched (20 agents). Field Notes lab and The Dossier built.
9:33	Focus Rep 1 (15 min). Focused very well, got more done than a usual whole day. Some agitation after, handled with breathing.
~10:00	Decided to drop 1-10 scores. New rule: one rep a day, one line of what got done, count the streak.
~10:05	Focus Rep 2, The Burn (6 min). 2 min prep, 3-4 min work, not agitated, 1 min deep breathing.
10:11	Admin block: stretch, texted therapist, BCBS portal, called IV nutrition office.
~10:40	Scale read 167 (pre-period, after a 3,000-cal day, full bladder). Estimated true weight 162-164.
~10:45	Booked B-Lean IV at Ender Family Medicine, ~1:15 pm today. Another health IV tomorrow.
~10:50	Low-calorie pizza in oven. Walked the green area with Shelby, 8 lb weighted vest on, 10-20 min.
~11:05	On the walk: logged food, sleep, period note, texts, picked tonight's first Lights Out tile.
~11:25	Weight plan set (see below). Wearing the 8 lb vest for chores today. Setting out babysitting outfit.
~11:30	Today's food rule: lots of water, plain food list, no calories, no stress.
~11:40	New operating system: tiny integrations, at her own pace, logged one at a time.

Exercises actually done

1. Morning sunlight (8:16-8:35)

1. Sit outside, no sunglasses, no scrolling, 10-15 minutes.

Result: 15 minutes done by 8:35.

2. Focus Rep 1, neuroplasticity experiment (9:33)

1. Write focus 1 to 10. (She wrote 4.)
2. Phone on Do Not Disturb.
3. Timer: 15 minutes.
4. Minutes 0-2: open only what you need, then stare at one spot for 30 seconds.
5. Minutes 2-13: work. If you drift, look at the spot 3 seconds, go back.
6. Minutes 13-15: lean back, eyes closed, slow exhales, do nothing.
7. Write focus 1 to 10.

Result: stayed the full 15 minutes. Focused very well. Got more done than in a usual entire day. Some agitation afterward, handled with breathing. Verdict: worked.

3. Focus Rep 2, The Burn (~10:05)

1. 10 squats.
2. Say "starting." Timer: 6 minutes.
3. Minute 0-1: paste the post. Open the first group.
4. Minute 1-6: post to group after group. When you feel the pull to look away, stay.
5. Timer ends. Stop.
6. Eyes closed, 5 slow exhales.
7. Say "done."

Result: 2 minutes getting the post ready, 3-4 minutes of work (Claude took over the drafting, so she switched to other work and stayed focused the whole time). Not agitated. 1 minute deep breathing. Verdict: worked.

4. Admin block (10:11)

1. Stretch in bed, 1 minute. Say "starting."
2. Timer: 2 minutes. Text therapist the two insurance questions.
3. Timer: 5 minutes. BCBS portal, find the one thing needed for the call, write it on paper.
4. Call the doctor's office about IV nutrition payments. One question: "What do I owe and how do I pay it?"
5. Hang up. Say "done." Eyes closed, 5 slow exhales.

Result: stretch done. Therapist text took 1 minute. BCBS portal took 3 minutes. Doctor's office called. All done.

5. Walk with Shelby, 8 lb weighted vest (~10:50-11:15)

1. Food, yesterday: said out loud into notes.
2. Food, today: same.
3. Water so far today: guess the glasses.
4. Sleep last night: bed time, wake time.
5. Period: note "due any day" with the date.
6. Two texts: boyfriend about dinner, one overdue reply.
7. Pick tonight's first Lights Out tile.
8. Gym: pick a time if going.
9. Last 2 minutes: phone away, look at the trees, slow exhales.

Result: food for yesterday and today logged. Water: only half of the goal so far. Sleep: 7-8 hours, woke around 7:30. Period: any day. Most of the rest done.

Plans set today

Weight, 167 to the 150s before December

- True baseline: weigh one week after period starts, morning, after the bathroom. Today's 167 likely includes 3-6 lb of water and food; estimated real weight 162-164.
- Rate: 1-1.5 lb per week. Calories: 1,700-1,900 with daily gym. Protein: 130 g across 3 meals.
- Same breakfast (smoothie) and same lunch every day. Five grab foods instead of meal prep: Greek yogurt, rotisserie chicken, eggs, protein shakes, frozen vegetables.
- Real protein lunch even when Adderall kills appetite. Weigh daily, judge the 7-day average. 3 lifting days. 7-9 hours sleep. Period week: +200 cal, no weighing.
- B-Lean IV: fine to go, but no evidence it causes weight loss. The plan above is what moves the number.
- Psycho-Cybernetics: one present-tense self-image sentence plus a 60-second scene, daily.

Focus and work

- One 15-minute rep a day, same shape, same time. Record the date and one line of what got done. Measure the streak, not a score.
- Every rep carries one revenue action: new renter outreach, follow-ups, posting where renters look, or contacting a leasing office.
- Sophia names the task; the exercise is built around it. No counts unless she asks.

Tiny integrations

- Name any small action, do it, report it, it gets logged. One at a time. Done beats good. Repeats become habits. Weekly review of what stacked up.

Tonight

- Lights Out routine, night 2. IV appointment today ~1:15 pm. Another IV tomorrow. Water: finish the Mason jars. Food list: send it in.

Streaks: bedtime routine 1 night · focus reps 2 today · sunlight 1 day · food log day 1
